**CHARACTERISTICS**

IDEAL FOR ALL FOAMING APPLICATIONS OF ALKALINES, DETERGENTS...

- Injected polypropylene tank, translucent white with measuring gauge, useful capacity 8L and total capacity 11L
- Integrated tank bottom dosing (graduations from 250 ml to 500 ml)
- Wide opening
- Safety valve with EPDM seam, 3 bars, integrated to the pump for more safety against shocks
- Pump with ergonomic handle, polypropylene rod, fit with a seam "CUP" EPDM
- Reinforced PVC piping, translucent, high resistance
- Professional lance handle with EPDM seams
- Polypropylene spray lance (mechanical and chemical resistance) 60 cm
- Support, carrying and maintenance knob for pressurizing

Fit with :

- An adjustable polypropylene nozzle holder with EPDM seams
- A stainless steel 15/10 nozzle with flat jet

BENEFITS :

- Wide upper opening (9 cm) for an easier filling
- Full emptying without any retention area
- Comfortable thanks to the support knob which eases the pumping

To have the best spraying quality for the application of the chemical product, it is imperative to have a pressurizing until the triggering of the valve.

APPLICATIONS :

- Neutral disinfectants
- Alkaline disinfectants - Suitable with alkaline products with PH between 6 and 10
- Detergents
