ARTICLE

Designation : **Sharpening steel DICK dickoron**

Code bobet :

2003 : 30 cm oval

6004 : 30 cm round

Selling Unit : **Unit**

Non-contractual pictures

**CHARACTERISTICS**

- Oval (code 2003) or round (code 6004)
- 30 cm = 12''
- This classic DICKORON sharpening steel allows, a very smooth sharpening thanks to its sapphire cut.
- The treated blade keeps sharp for a longer time without getting rough
- Carbon steel with a layer of chrome - Hardness: 66 ° HRC
- Polyamide handle
- Sapphire cut

The production technologies of DICK sharpening steels guarantee a longlasting and wear resistant use. The special handles ensure a safe grip.

- Balanced taper towards the tip of the steel
- Regular serrations
- Wear-resistant surface with breakproof, tough core
- Efficient surface protection through hard chrome-plating
- Safety through high-quality fittings
- Ergonomically formed and optically representative handles

*** CLEANING**

Sharpening steels can be cleaned in sterilizers up to 130 ° C. The residues of washing products are very concentrated, tools left in the washer for a long time, as well as white egg and meat residue can cause stains on the blade. That is why we strongly recommend cleaning immediately with a mild alkaline acid-free detergent such as sodium hypochlorite (bleach) which will corrode the blade . Sodium hypochlorite is the main component of cleaning agents for bleaching and disinfection.

STANDARDS :

In compliance with the EU regulations related to materials and items in plastic in contact with foodstuffs and in compliance with the CM/Res (2013) resolution on metals and alloys in contact with foodstuffs.
