CHARACTERISTICS

Polyurethane spiral tube, useful length 4 meters, with nipple BSPP (British Standard Parallel Pipe) conical.

- The useful length corresponds to the maximum length recommended to insure the best persistence of the tube, after many uses.
- This polyurethane spiral tube is especially adapted to plants needing a very flexible bonding in a reduced space, thanks to very low spires diameters.
- Its straight ends fit with nipples, its good resistance to shocks and abrasion ensure an easy and safe use of the pneumatic equipment.
- In compliance with the standard NF E49-101. Hardness : 52° Shore D.
- Compatible with the blowgun (code Bobet 11017).
- Using pressure : 0 to 10 bar
- Using temperature : -20°C to +70°C
